Faber Tile & Stone Care

Why Choose Faber?

The Difference is in the Results, unique Chemistry and Technology.

Faber Tile & Stone Care delivers solutions for cleaning, protecting, and restoring tile and natural stone. Faber's formulas are used in the manufacturing process of tile, with those and more formulas now available for on-site uses. Here are the key reasons customers choose Faber over alternative brands worldwide and why these results will create unique opportunities for your business.

What Makes Faber Different?

- Higher-strength chemistry with safer application. Many Faber cleaners and sealers deliver pro-level performance without harsh odors or unnecessary risk.
- Problem-solving formulas competitors can't match.
- Products that work, are easier to use, and provide better results mean higher customer satisfaction.

Unique Solutions Competitors Can't Match

Acid Prevention Treatment for Marble Countertops - Unlike competitors' products that are expensive and many require professional application and UV setting, this is an inexpensive and easy-to-apply product. AS 930 CP creates a barrier that prevents acid etching (corrosion from lemon juice, vinegar, wine) on marble and soft stones, while maintaining a natural, polished finish.

Porcelain Tile Scratch Remover - The only products on the market that are made for the restoration of scratched polished porcelain tiles, slabs, countertops, etc., tiles damaged by abuse, abrasive floor traffic, leveling systems, thinset scratches, etc. Scratch Off Kit, everything needed for light and dark tiles in 1 kit, or the ABR 600 and Porcelain Restoration cream, micro-honing products that restore defects and abrasion by filling in scratches and restoring finish without tearing out entire floors or countertops

Deep Stain Removal for Porcelain Tiles and Stone - 4 unique solutions, No Mac Gel is a water-based stain remover specifically designed for organic stains (coffee, wine, mold, permanent marker) that have penetrated deeply, Mar Gel Plus / Oxidant for Rust Stains, and No Oil for oils and greasy stains. Poultice for Humidity stains, tannin, and yellowing. Unlike harsh solvents that can strip sealers or damage stone, most can be applied directly and left to work without dulling the natural shine.

Anti-Slip Treatments - 2 solutions, for tile and marble. YS One is a water-based treatment developed to increase surface grip on ceramic, stoneware, quartz, and granite. Safe Marble, original look, no film treatment. Both increase the safety of floors in locations that often get wet and slippery.

Universal Polishing Product - Creates a glass-like shine through a chemical and mechanical reaction with the stone, not a wax coating, resulting in a durable finish that enhances natural color. This waterless, mess-free application works on marble, granite, limestone, and terrazzo while improving slip resistance in dry conditions.

A Complete, Integrated System

Faber also offers multiple problem-specific kits, including the Scratch Off Kit, Restoration Kit, and Maintenance Kit. These kits are designed to bundle the necessary chemistry for specific surfaces, ensuring the user has the complete system in one ready-to-use package.

Fewer callbacks. Better finishes. Longer-lasting protection.
Solutions you can't get from competing brands.
