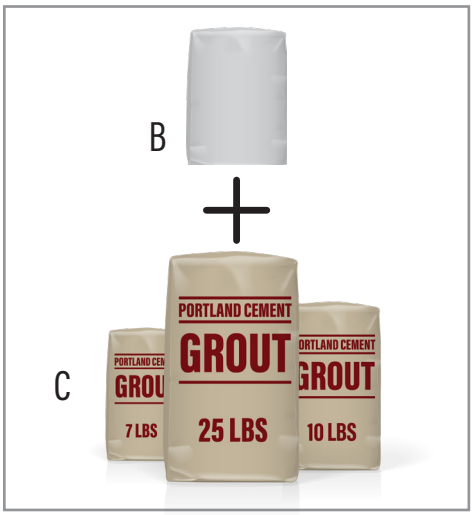
INSTALLATION GUIDE

GROUT BOMB

After choosing a quality grout follow the directions below.

1. Follow the mixing instructions provided by your brand of grout.

2. Tear seal (A) and remove inner self-dissolving pouch (B).



3. Drop one self-dissolving pouch (B) per 7-25 lbs of grout (C) during the mixing process.

The 100 gram pre-ratioed pouch can be added to any sanded or un-sanded grout box or bag up-to 25lbs. Not for use with epoxy, premixed or other grout specifically stating on the label that no other additives may be used. Grout Bomb is engineered to function just like cement functions within the grout, will blend seamlessly for added performance, and has been tested to ensure it will not change color or appearance of finished grout.

Grout Bomb adds an integrated sealer into Portland Cement Grouts before application, no need to seal later. For use with sanded or un-sanded grouts. Sealing action provides a built-in reaction time for cleaning up spills and other messes that would normally damage unprotected grout.

Do it once and do it right with Grout Bomb!
