
PATENTED

Normal by day. Lit by night.

IllumiTile™ marks the edges that matter — stair treads, pool copings, level changes and walkways — with a glow built into the tile itself. Safety demarcation and unlimited design, with no wiring and nothing to maintain.

the Tile Doctor

IllumiTile™

Safety demarcation and unlimited design, built into the tile

Safety you can design.

IllumiTile™ tiles arrive from the factory with the glow already built in, in a range of designs and options. They charge in daylight and give the light back after dark, marking boundaries, edges and level changes for as long as they are in the ground. Not plastic aggregate cast into concrete: the glow sits in real porcelain, stone and paving, so it keeps the finish, durability and chemical resistance of the surface it lives in.

Stair nosings
Every tread edge marked, with nothing to install or replace

Pool copings
The water's edge stays visible after the lights go off

Drives & entries
Borders and bands that mark the edge of the drive

Commercial wayfinding
Routes and exits marked without running power

Terraces & patios
Accent tiles set among plain paving

Logos & monograms
A mark in the floor that only appears at night

Lines & borders
A continuous glowing line marking a tread, coping or level change

Fields & patterns
Points of light across the face of the tile, to any layout
